Abstract

1. Pet Adoption Center Website:

This project aims to design and develop a responsive multi-page Pet Adoption Center website using only HTML5 and CSS3. The website serves as an online platform for showcasing available pets, sharing adoption procedures, and providing contact details for potential adopters. The focus was on creating a user-friendly interface with a visually appealing design, consistent color palette, and responsive layout that works across devices. The final outcome is a clean, structured, and accessible front-end website that promotes pet adoption and provides essential information to visitors.

2. Personal Portfolio Website

This project presents two individual portfolio websites, designed exclusively with HTML and CSS. Each portfolio showcases personal information, skills, projects, and contact details in a visually appealing and responsive layout. The goal was to practice modern UI design principles, maintain accessibility, and achieve clean, semantic code. The final product is a static, responsive website that can be used for academic and professional presentation.

Pet Adoption
Center Website

Objectives

- I. Present pet adoption opportunities through a visually engaging, responsive interface.
- II. Implement **semantic HTML5 elements** for better structure and accessibility.
- III. Use **CSS Flexbox and Grid** to create adaptable layouts.
- IV. Maintain a **consistent color palette and typography** for brand identity.
- V. Ensure cross-device compatibility for desktop, tablet, and mobile users.

Scope of the Project

The project focuses entirely on **front-end design and layout**. It includes:

- Five fully designed pages: Home, About Us, Available Pets, Adoption Process, Contact.
- Responsive layout suitable for multiple screen sizes.
- Use of **open-source images** and **Google Fonts** for aesthetics.
- Excludes server-side scripting, databases, and advanced interactivity beyond hover effects.

Tools & Technologies Used

<u>Tool / Technology</u>	<u>Purpose</u>
<u>HTML5</u>	<u>Structure and semantic markup</u>
<u>CSS3</u>	<u>Styling, responsive layout</u>
<u>Google Fonts</u>	<u>Custom typography</u>
<u>VS Code</u>	<u>Development environment</u>
<u>Chrome DevTools</u>	<u>Responsive testing and debugging</u>

HTML Structure Overview

- I. All pages begin with <header> containing the site logo/title and navigation links.
- II. <nav> provides links to all sections/pages for smooth browsing.
- III. Content is divided into <section> and <article> elements for clarity.
- IV. <footer> repeats on all pages with social links and copyright.

CSS Styling Strategy

- I. **External CSS file** for maintainability.
- II. **Mobile-first design** enhanced with media queries.
- III. Flexbox used for navigation and footer alignment.
- IV. Grid layout applied to the pet listing page for visual balance.
- V. Hover animations for buttons and pet cards to improve engagement.

Key Features

- I. **Multi-Page Navigation** — Consistent menu structure across all pages.
- II. **Pet Listing Cards** — Image, name, and availability displayed clearly.
- III. **Hero Banner** — Eye-catching welcome section on the homepage.
- IV. **Step-by-Step Adoption Guide** — Simple, visual explanation of the adoption process.
- V. **Contact Form Layout** — User-friendly fields for inquiries (non-functional in this version).

Challenges Faced & Solutions

<u>Challenge</u>	<u>Solution</u>
<u>Pet images distorted on smaller screens</u>	<u>Used object-fit: cover for uniform appearance</u>
<u>Navigation menu crowded on mobile</u>	<u>Applied flex-wrap and column layout in media queries</u>
<u>Maintaining consistent spacing</u>	<u>Defined reusable CSS classes for margins/paddings</u>

Outcome

The website successfully delivers a **clear, aesthetically pleasing, and responsive** interface that communicates the mission of a pet adoption center. It can serve as a base for future full-stack integration.

Future Enhancements

- I. Add **JavaScript filtering** to sort pets by breed, age, or status.
- II. Implement **form submission backend** to process adoption requests.
- III. Include **image gallery sliders** for each pet profile.
- IV. Add **dark mode** for accessibility.

Conclusion

The “Happy Paws” front-end project demonstrates how effective design principles and modern CSS techniques can be used to create an intuitive, responsive website without relying on JavaScript. This project improved my understanding of **UI/UX workflows**, **mobile-first design**, and **semantic HTML structures**, skills that are essential for real-world web development.

Personal
portfolio
website

Objectives

- a. Design two unique portfolio layouts following modern UI/UX principles.
- b. Develop a fully responsive site using only HTML and CSS.
- c. Organize content with semantic HTML5 elements.
- d. Apply CSS styling to achieve branding consistency.
- e. Ensure readability and accessibility across devices.

Scope of the Project

The project is limited to front-end development, focusing on visual design and layout. No JavaScript or backend integration was implemented. The design supports desktop, tablet, and mobile devices using responsive design techniques.

Tools & Technologies Used

<u>Tool / Technology</u>	<u>Purpose</u>
<u>HTML5</u>	<u>Structure and semantic markup</u>
<u>CSS3</u>	<u>Styling, responsive layout</u>
<u>Google Fonts</u>	<u>Custom typography</u>
<u>VS Code</u>	<u>Development environment</u>
<u>Chrome DevTools</u>	<u>Responsive testing and debugging</u>

HTML Structure Overview

Used semantic tags: <header>, <nav>, <section>, <footer>.

Organized into About, Skills, Projects, and Contact sections for each portfolio.

Navigation implemented with anchor links for smooth section scrolling.

CSS Styling Strategy

CSS styles were embedded in the HTML file.

Flexbox was used for alignment and layout.

Color scheme: dark background with neon cyan highlights.

Hover effects for navigation links.

Mobile-first responsive adjustments using media queries.

Key Features

Responsive Design - Adapts seamlessly to various screen sizes.

Smooth Navigation - Top navigation bar with anchor links.

Profile Picture Styling - Circular images with border accents.

Skills Badges - Highlight key skills in visually distinct labels.

Consistent Branding - Dark theme with cyan accent color.

Challenges Faced & Solutions

<u>Challenge</u>	<u>Solution</u>
<u>Pet images distorted on smaller screens</u>	<u>Used object-fit: cover for uniform appearance</u>
<u>Navigation menu crowded on mobile</u>	<u>Applied flex-wrap and column layout in media queries</u>
<u>Maintaining consistent spacing</u>	<u>Defined reusable CSS classes for margins/paddings</u>

Outcome

Successfully developed two responsive portfolio pages using only HTML and CSS. The project improved understanding of responsive layouts, semantic HTML, and consistent UI design.

Future Enhancements

Add JavaScript for interactive elements.

Implement a contact form with backend integration.

Introduce animations and theme toggling.

About Me

Hello, my name is **Harshdeep Sharma**, and I am a 2nd-year B.Tech student specializing in Computer Science (AI & ML) at Christ University, Kengeri Campus. I have a strong passion for emerging technologies, especially in artificial intelligence, machine learning, and data science. My academic journey has given me a solid foundation in programming, algorithms, and intelligent systems, enabling me to solve problems with both analytical and creative approaches. I ~~enjoy exploring~~ how AI can be

Conclusion

This project enhanced our practical skills in HTML and CSS, reinforcing concepts of responsive design, layout structuring, and UI/UX best practices.
